ATCC® MINIS

Repeated subculturing can be detrimental to quality control. Each passage carries the potential for contamination, drift, and mutation, taking your culture farther and farther from the parental genotype and phenotype. To help you maintain the highest levels of product integrity and reputation, ATCC provides top-quality microbial reference materials that support outstanding quality control programs.

BIG QUALITY IN A TINY TUBE

Trusted ATCC Genuine Cultures® are offered in a convenient, single-use, "mini" format that saves you precious time and resources.

- Six pack of ready-to-use strains in glycerol stock
- Now stable for up to one year at -20°C*
- Glass-free mini-cryovials with 2D barcode for easy storage and tracking
- Peel-off labels for fast and reliable recordkeeping

ATCC® Minis are authenticated and backed by ATCC polyphasic testing – ensuring the consistency and reliability you have come to trust from ATCC Genuine Cultures®.

**Some fastidious strains are not stable at -20°C. Please refer to the product sheet for an item's appropriate storage temperature.*

ATCC QUALITY CONTROL STRAINS

With ATCC Genuine Cultures®, you can rely on:

- Polyphasic identification and strain characterization to establish identity, viability, and purity
- Careful preservation and storage protocols to maintain each culture
- Utilization of a seed stock system to minimize subculturing

Whenever possible, ATCC balances traditional biochemical testing methods with automated phenotypic and genotypic analyses to ensure highly accurate identification across a wide array of microorganisms. What's more, each ATCC Genuine Culture® is manufactured under ISO 9001:2008 certification and ISO/IEC 17025:2005 accreditation and represents a direct, minimal-passage descendant of the original deposited material, so you can be sure that you are receiving a top-quality, fully characterized strain.

Don't take chances on the quality of your cultures! Ensure the quality of your products with ATCC® Minis!
